### Basic Shape
Using curve shape (semicircle) as a start point to explore the facade.
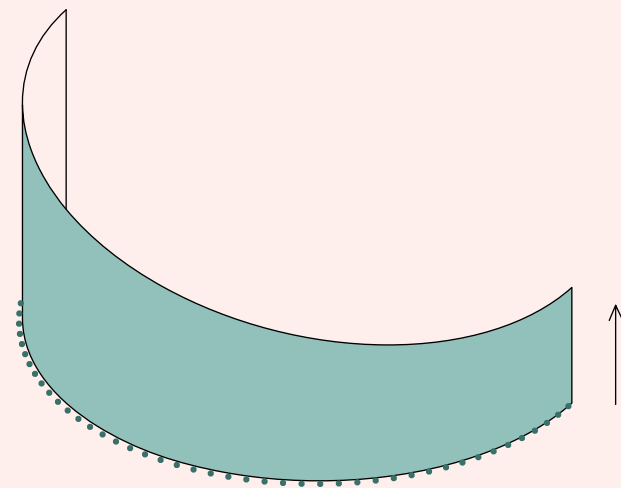

Subtraction
Cutting off the top area with a specific angle to bring a dynamic shape.
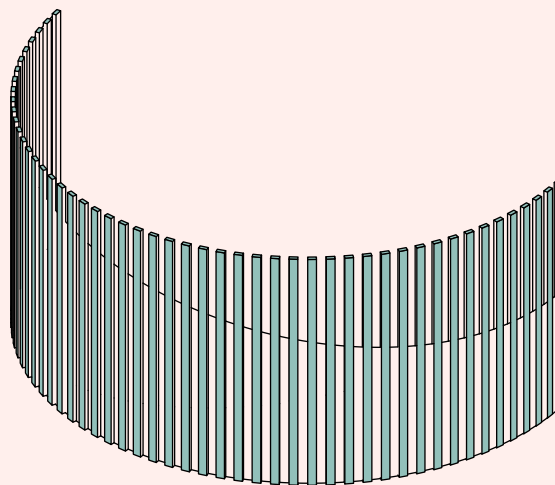

Accurateness
The rest part of the shape will be remained to move forward exploration.
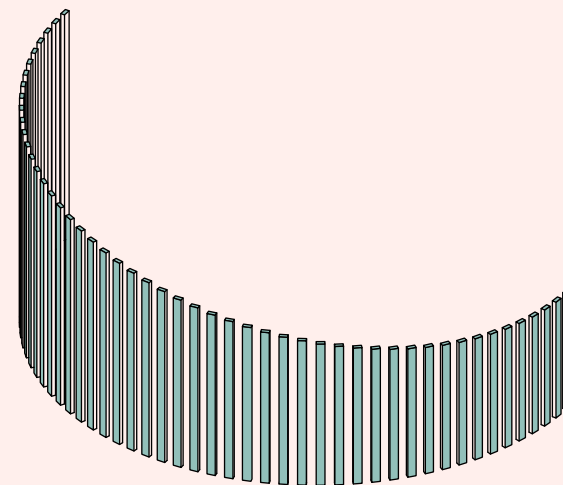

Division
Dividing the shape from the base evenly and extruding rectangular bars with a same height.

Subtraction
Using the curve shape as a template cuts all top parts of those rectangular bars.

Elimination
Deleting all references (curve and dots) and remaining the rest of rectangular bars as the final facade of this project.
